

“ At Pershing Health System, our X-ray equipment is designed for the patient’s comfort and safety. We can get X-rays of while a patients is standing or sitting and while a patient is in bed by bringing a portable machine to the patient’s hospital bedside. ”

**Danny Bartlett, PHS Director of Diagnosistic Services**

### **Samsung GM 85 Portable X-ray Machine**

This portable XRAY machine takes images without moving the patient from the bed. It delivers high-quality digital images so physicians can clearly see what is going on in the body. It also provides six-stage weight-dependent imaging, precise dose control for both children and adults.

### **Samsung GC85A Digital Radiography X-ray machine**

This X-ray machine is for taking images larger than the portable system allows. The patient can be X-rayed while standing, lying down on a table, or sitting in a wheelchair. This top-notch equipment is versatile allowing for getting images while the patient is as comfortable as possible.
